

JAVA -JUnit

Prompt

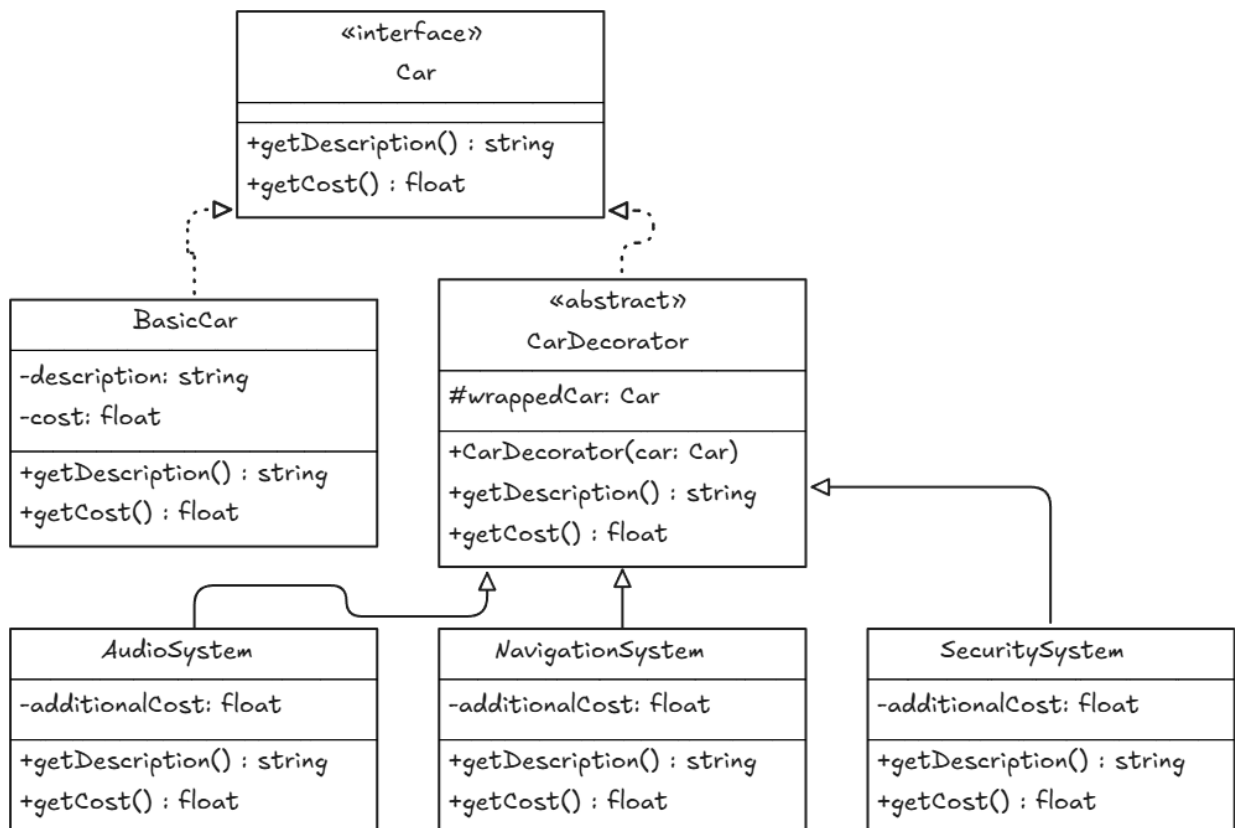

-Decorator

Use the Decorator pattern to write code in Java programming language and write JUnit to test the given code that have 100% statement coverage from the requirements below.

Use Decorator pattern to design automotive system development by adding features to cars, such as audio system, navigation system or security systems without changing the main structure of the car.

Code:

Decorator

รอบที่3

AudioSystemDecorator

```
public class AudioSystemDecorator extends CarDecorator {

    public AudioSystemDecorator(Car car) {
        super(car);
    }

    @Override
    public String assemble() {
        return super.assemble() + ", Audio System";
    }

    @Override
    public double cost() {
        return super.cost() + 1500.0;
    }
}
```

BasicCar

```
public class BasicCar implements Car {

    @Override
    public String assemble() {
        return "Basic Car";
    }
}
```

```
}

@Override
public double cost() {
    return 20000.0; // Base price of the car
}
}
```

Car

```
public interface Car {

    String assemble();

    double cost();

}
```

CarDecorator

```
public abstract class CarDecorator implements Car {

    protected Car car;

    public CarDecorator(Car car) {

        this.car = car;

    }

}
```

```
@Override

public String assemble() {

    return car.assemble();

}
```

```
@Override

public double cost() {

    return car.cost();

}

}
```

CarTest

```
import static org.junit.Assert.assertEquals;

import org.junit.Test;

public class CarDecoratorTest {

    @Test

    public void testBasicCar() {

        Car car = new BasicCar();

        assertEquals("Basic Car", car.assemble());

    }

}
```

```
        assertEquals(20000.0, car.cost(), 0.01);  
  
    }  
  
}
```

@Test

```
public void testCarWithAudioSystem() {  
  
    Car car = new AudioSystemDecorator(new BasicCar());  
  
    assertEquals("Basic Car, Audio System", car.assemble());  
  
    assertEquals(21500.0, car.cost(), 0.01);  
  
}
```

@Test

```
public void testCarWithNavigationSystem() {  
  
    Car car = new NavigationSystemDecorator(new BasicCar());  
  
    assertEquals("Basic Car, Navigation System", car.assemble());  
  
    assertEquals(22500.0, car.cost(), 0.01);  
  
}
```

@Test

```
public void testCarWithSecuritySystem() {  
  
    Car car = new SecuritySystemDecorator(new BasicCar());  
  
    assertEquals("Basic Car, Security System", car.assemble());  
  
    assertEquals(23000.0, car.cost(), 0.01);  
  
}
```

```
@Test

public void testCarWithAllFeatures() {

    Car car = new SecuritySystemDecorator(

        new NavigationSystemDecorator(

            new AudioSystemDecorator(

                new BasicCar())));

    assertEquals("Basic Car, Audio System, Navigation System, Security System", car.assemble());

    assertEquals(27000.0, car.cost(), 0.01);

}

}
```

NavigationSystemDecorator

```
public class NavigationSystemDecorator extends CarDecorator {

    public NavigationSystemDecorator(Car car) {

        super(car);

    }

    @Override

    public String assemble() {
```

```
        return super.assemble() + ", Navigation System";

    }

    @Override

    public double cost() {

        return super.cost() + 2500.0;

    }

}
```

SecuritySystemDecorator

```
public class SecuritySystemDecorator extends CarDecorator {

    public SecuritySystemDecorator(Car car) {
        super(car);
    }

    @Override
    public String assemble() {
        return super.assemble() + ", Security System";
    }

    @Override
    public double cost() {
        return super.cost() + 3000.0;
    }

}
```
